Smart System to Carry What you Need in the Ocean

Black Tec Scuba Side Mount Back Pouch unlike other traditional side mount pouches, using the "Smart System" for mounting the accessories, Instead of hanging tons of bolt snaps to hook your finger reel, backup lights spare masks ...etc, what we do is using bungee. You can create your own compartments to suit your needs. The set-up is easy. Just place the bungee through the compartment distribution tube and tying a knot on both end with your desired length. Then mount the accessories using the bungee as shown in the picture. There is no limit on the size, length and arrangement of how you tide your bungee. You can create your own personalized styles and this is what we believe in customization. Moreover, the opening of the pouch is different. Our special design let you find your gears by seeing it. The pouch can be hanged across your chest and you get your gears by seeing it.
